

SAATIPRINT

This contact moisture meter is the first instrument designed specifically to determine when a screen stencil is dry enough to be exposed.

TQM Aqua-check™ is a battery – operated contact meter that provides a direct reading of the residual moisture on coated and dry screens to ultimately prevent pinholes and premature stencil break down. Its modest cost can save you big outlays in press down time and stencil remakes. Simply hold it against the emulsion surface and press the read button.
